

Coding & Solution

Date	2 October 2026
Team ID	6ab7f3e4b8 bf817b7f72 4e1d / SWTID-20267059
Project Name	FitBuddy
Maximum Marks	5 Marks

Solution Summary

Field	Details
Repository Link / URL	https://github.com/DEENA-007/FitBuddy
Programming Language(s)	Python 3
Framework(s) Used	FastAPI, SQLAlchemy, Jinja2
Key Features Implemented	- Personalized 7-day workout plan generator using Gemini 1.5 Pro based on user metrics (age, weight, goal, intensity). - Quick and relevant nutrition tips powered by Gemini 1.5 Flash. - Feedback-based workout plan iteration and refinement. - Admin dashboard to view all stored user profiles and generated plans. - Persistent local storage using SQLite and SQLAlchemy ORM.
Pending / Incomplete Features	None (Core prototype features are fully implemented)
Setup / Run Instructions	- Clone repository and navigate to the project folder (cd fitbuddy). - Create and activate a virtual environment (python -m venv venv followed by activation command). - Install dependencies via pip install -r requirements.txt. - Configure your Google API Key in a .env file (GOOGLE_API_KEY="your_api_key_here"). - Start the development server using uvicorn app.main:app --reload and open

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project architecture strictly separates concerns across dedicated modules (routes.py, database.py, gemini_generator.py, etc.), ensuring maintainability and clean structure.
