

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	01-10-2026
Team ID	6ab7f3e4b8 bf817b7f72 4e1d
Project Name	FitBuddy
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

1. Before You Collaborate

- **Time Allocation:** 10 minutes to prepare, 1 hour to collaborate.
- **Team Gathering:** 5 active team members collaborating remotely and synchronously.
- **Set the Goal:** Formulate creative, feasible solutions to create a Gemini-powered fitness plan generator that takes user attributes, supports regeneration via dynamic feedback, and provides supervisory oversight for administrators.
- **Key Rules of Brainstorming:** Defer judgment, encourage wild ideas, go for quantity, and build on each other's suggestions.

2. Define Your Problem Statement (How Might We)

No.	Focus Area	How Might We Statement
HMW 1	End-User Personalization	How might we leverage Google Gemini models to generate an accurate, balanced 7-day workout plan based on basic user profile data (name, age, aim, interest)?
HMW 2	Dynamic Feedback Loop	How might we enable users to submit exercise feedback and receive an adapted, regenerated plan without losing their weekly structure?
HMW 3	Administrative Oversight	How might we provide platform administrators with an intuitive dashboard to monitor generated plans, verify fitness safety, and observe feedback trends?

Step-2: Brainstorm, Idea Listing and Grouping

Idea Listing (5-Member Collaborative Contributions)

Member	Focus Area	Ideas Contributed
Member 1	Prompt Engineering & Core AI Logic	- Structure input templates passing Age, Aim (e.g., hypertrophy, weight loss, mobility), and Interest (e.g., home, gym, calisthenics) to Gemini models. - Implement safety-first system instructions to avoid high-injury movements for beginners or older age brackets.
Member 2	Dynamic Feedback & Plan Regeneration	- Design a post-workout feedback modal with quick tags (e.g., "Too intense", "No barbell", "Sore shoulders") plus open-text feedback. - Create a regeneration prompt pipeline that keeps successful days intact and updates only problematic sessions.
Member 3	Admin Dashboard & Logging	- Build an Admin Overview interface displaying all user-generated workout routines in a sortable table. - Add filtering tools for admins to view user feedback history and flag abnormal routine requests.
Member 4	User Experience & Input Onboarding	- Build a clean multi-step onboarding form capturing user name, age range, fitness aim, and exercise interest. - Present the 7-day schedule in clean daily cards with exercise names, sets, reps, and designated rest days.
Member 5	Export & Utility Features	- Provide a one-click PDF export feature for offline workout tracking. - Include clear warm-up and cool-down guidance automatically appended to each daily routine.

Group Ideas (Thematic Clusters)

Cluster	Theme	Scope
Cluster 1	User Onboarding & Attribute Ingestion	Data capture for name, age, primary fitness aim, and activity interest.
Cluster 2	Gemini Generation & Prompt Pipeline	Structured 7-day routine creation, workout split rules, recovery day allocations.
Cluster 3	Interactive Feedback & Adaptation Loop	Feedback capture form, contextual regeneration prompt, incremental routine updates.
Cluster 4	Administrative Governance & Plan Inspection	Centralized plan viewer, feedback audit log, administrative monitoring.

Step-3: Idea Prioritization

Features were placed on the Importance vs. Feasibility grid to decide what the team builds first:

Prioritization Quadrant	Feature Ideas	Roadmap Action
High Importance / High Feasibility (Core MVP)	- Form collection: Name, Age, Aim, Interest. - Gemini prompt to generate structured 7-day workout plans. - Feedback input box for regenerated plan adjustments. - Admin view to list and read all user workout plans.	Sprint 1 (Must Build)
High Importance / Low Feasibility (Strategic / Long-term)	- Computer vision pose estimation via phone camera. - Automated health metric syncing with wearable devices (Apple Health / Google Fit). - AI-driven nutritional meal planning integration.	Future Release Scope
Low Importance / High Feasibility (Quick Wins)	- Printable/PDF version of the 7-day routine. - Interactive checkboxes to track completed workouts each day. - UI dark mode support.	Sprint 2 (Secondary)
Low Importance / Low Feasibility (Out of Scope)	- Peer-to-peer social networking and public user feed. 3D animated avatar demonstrations for every exercise.	Deprioritize / Drop
